

Do you have atypical endometrial hyperplasia (AEH) or grade 1 endometrial cancer?

Are you interested in fertility-sparing treatment?

Tailored weight loss may help premenopausal women with endometrial hyperplasia or early-stage endometrial cancer avoid hysterectomy.

You may be eligible for our study if you:

- Are 18-45 years old
- Have a BMI ≥ 30 kg/m²
- Have endometrial precancer or Grade 1 endometrial cancer
- Want to avoid a hysterectomy

Talk to your
doctor today
about enrolling
in this study or
contact us at:

(314) 362-1707

What does participation involve?

- Use of a Levonorgestrel Intrauterine Device (IUD)
- Standard clinic visits with your doctor
- Blood draws and questionnaires
- A focus on weight loss including either:
 - One-on-one telemedicine counseling visits with a psychologist
 - Handouts on topics of diet and exercise

Participants will receive a \$50 gift card.
