

Do you have atypical endometrial hyperplasia (AEH)?

Are you interested in fertility-sparing treatment?

Weight loss drugs may help premenopausal women with endometrial hyperplasia avoid hysterectomy.

You may be eligible for our study if you:

- Are 18-45 years old
- Have a BMI ≥ 30 kg/m²
- Have endometrial precancer
- Want to avoid a hysterectomy

314-747-1272

What does participation involve?

- Use of a Levonorgestrel Intrauterine Device (IUD)
- Injecting semaglutide (Wegovy) or placebo weekly at home
- Standard clinic visits with your doctor
- Blood draws and questionnaires
- Telemedicine weight loss program with a psychologist
