Postdoctoral Fellowship
Clinical outcomes research training
in Female Lower Urinary Tract Disorders

The Divisions of Female Pelvic Medicine & Reconstructive Surgery and Public Health Sciences at Washington University School of Medicine are seeking applications for a Postdoctoral Fellowship in clinical outcomes research training in Female Lower Urinary Tract Disorders. PhD applicants from diverse backgrounds, including Epidemiology, Economics, Anthropology, and many others related to clinical outcomes research, are encouraged to apply.

The training program includes:
• Didactic training in clinical outcomes research methodology
• Individualized mentorship
• Access to patients and data from local and national leading studies
• Clinical exposure through operating room and outpatient clinic shadowing
• A multi-faceted career development program
• Excellent benefits & competitive salaries

Women’s health is impacted by a number of important, but often overlooked, clinical conditions. Among these are lower urinary tract disorders, including childbirth-related conditions, urinary incontinence, bladder pain, and recurrent UTIs.

OUR GOAL:
Introduce postdoctoral fellows to female lower urinary tract disorders and train them to conduct high-quality clinical outcomes research in this emerging field.

Training will be accomplished through an immersive, yet flexible, program designed to provide fellows with the research methodology, clinical exposure, and track record of productivity to succeed in this field.
