Focus on often overlooked conditions in women’s health, e.g., childbirth-related conditions, bladder pain, urinary incontinence, and recurrent UTIs. Training will be accomplished through an immersive, yet flexible, program designed to provide fellows with the research methodology, content knowledge, and track record of productivity to succeed. Fellows will gain invaluable on-campus training in a diverse and affordable Midwestern city that is rich in culture, entertainment, outdoor exploration, restaurants, and more.

MAKE AN IMPACT!

TRAINING INCLUDES:

- Individualized mentorship from a vibrant group of successful faculty
- Didactic training in research methodology and women’s health
- Collaborative, transdisciplinary approaches applied to the most pressing questions in the area of female lower urinary tract disorders
- A multi-faceted career and professional development program
- Access to patients and data from local and national leading studies
- Opportunities to develop and apply for research grants
- Up to three years of funding with competitive benefits
